

Research-First Clinical Trial Management

Stop Managing Spreadsheets. Start Discovering Insights.

STUDYPRO is a secure, low-cost, and easy-to-use platform designed by researchers, for researchers. It is the first clinical trial management system (CTMS) that seamlessly unifies every part of your research workflow: from study setup and subject management to multimodal data collection, financial tracking, and powerful, publication-ready analytics. Stop wasting time wrestling with fragmented data in spreadsheets, shared drives, and separate analytics tools. STUDYPRO provides a single, centralized hub for your entire team, ensuring data integrity, automating compliance, and getting you from enrollment to insight faster than ever before.

The All-in-One Platform Built for Modern Research

UNIFY YOUR WORKFLOW: Manage staff, cohorts, subjects, multimodal data, and finances — all in one place.

ACCELERATE YOUR INSIGHTS: Move directly from data collection to analysis with built-in analytics and AI-powered summaries.

ENSURE COMPLIANCE: Complete, unchangeable audit logs and consent tracking make every study audit-ready.

DEPLOY IN MINUTES: Cloud or on-premises setup with intuitive guided workflows.

MAINTAIN 100% DATA OWNERSHIP: Export all study data anytime — no vendor lock-in.

Why Adopt a Clinical Trial Management System (CTMS)?

Modern clinical research requires coordination across multiple disciplines, sites, and datasets. Spreadsheets and shared folders often result in fragmented information, poor audit trails, and data integrity risks. A CTMS centralizes everything: participant registration, biomarker tracking, analytics, and compliance.

By adopting a CTMS, research teams can:

- Ensure data consistency and integrity.
- Automate compliance with full audit trails and consent logs.
- Enhance collaboration via a single source of truth.
- Reduce administrative overhead.
- Enable advanced analytics for faster insights.

How STUDYPRO Solves Real-World Challenges

Challenge: Complex and expensive setup.

Solution: Deploy in minutes — no multi-week installations.

Challenge: Steep learning curve.

Solution: Guided study creation, built-in help, and Sample Study Generator.

Challenge: Fragmented workflows.

Solution: Unified data entry for biological and digital biomarkers.

Challenge: Limited AI insights.

Solution: Integrated AI for automated results summarization.

Challenge: High licensing costs.

Solution: Affordable, scalable pricing for academic and public research.

360° Subject Management

De-identification: Use External Subject Codes for privacy.

Rich History: Track clinicians, diagnoses, medications, and contacts.

Consent Tracking: Version-controlled logs of all consent forms.

Subject Documents: Attach scanned forms, lab results, and reports.

Financial & Document Control

Financial Ledger: Record budgets, expenses, top-ups, and view burn rate.

Document Repository: Store all protocols, ethics approvals, and brochures securely.

True Multimodal Data Collection

Biomarkers: Record numerical data for biological samples.

EEG Data: Upload and link raw EEG files.

Wearables: Log raw wearable datasets.

Data Calendar: Visualize recording activity and identify gaps.

Built-in Analytics

Cohort Comparison: Automated statistical testing (T-Test, ANOVA, Mann-Whitney).

Subject Over Time: Longitudinal tracking per biomarker.

Data Distribution: Histograms and density plots.

Correlation Analysis: Relationships between biomarkers.

Automated AI Analysis: Narrative summaries of trends and findings.

Real-Time Dashboards

KPIs for enrollment, recordings, and budget.

Cumulative enrollment, burn rate, and heatmaps for subject activity.

Built for Compliance & Data Integrity

Full audit trail for all data actions. Role-based access ensures security. Consent logs maintain time-stamped histories.

Low Cost, Easy Setup, Full Data Ownership

Deploy in minutes. Train in hours. Affordable for academia. Export all data anytime — 100% ownership. Source code available for customization and organizational branding.

How We Compare to Other CTMS Platforms

Feature	Traditional CTMS	STUDYPRO
Deployment	Vendor installation required	One-click cloud or local setup
User Onboarding	Formal training sessions	Sample study generator
Cost	High per-user license fees	Low academic-friendly pricing
Analytics	Static reports or external tools	Built-in analytics
Data Types	Limited discrete data	Biological and Digital
Compliance	Manual audit trails	Automatic audit logging
Data Ownership	Vendor-controlled exports	Full unrestricted access

Ready to Streamline Your Research?

STUDYPRO is more than a CTMS—it's a complete research ecosystem. Reduce your administrative burden, ensure data integrity, and accelerate discovery.
